DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 8/01/2007 has been entered.

Allowable Subject Matter

1. Claims 1-4 are allowed.

The following is an examiner's statement of reasons for allowance: As to claim **1**, the prior art of record does not teach or fairly suggest an image capturing apparatus comprising: an image sensor having an image capturing area including four blocks with a plurality of pixels and a position adjustment mechanism for changing a relative position between the image capturing area of the image sensor and an optical axis of the incident light directed from an optical system to the image capturing area, by 1/2 of one or both of a longitudinal and lateral length of the blocks determined by the number and position in the grid of operational blocks of the plurality of blocks, such that the center of the image capturing area of operational blocks coincides with the optical axis of the incident light in combination with rest of the claim. As to claim **4**, the prior art of record does not teach or fairly suggest an image capturing apparatus comprising: an image sensor having including a determined number of blocks, wherein a plurality of different packages are provided including a package in which the chip having all the determined number of blocks

is attachable so that a center of all the determined number of blocks constituting the image capturing area coincides with an optical axis of the incident light, and another package to which the chip having the blocks of less than the determined number is attachable so that a center of at least one of the blocks of less than the determined number constituting the image capturing area coincides with the optical axis of the incident light.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. As to US # 7,123,292, Chen discloses an imaging apparatus able to adjust a position of an optical axis by $\frac{1}{2}$ a longitudinal and lateral length of an area of interest, which is approximately 4 times the size of the sensor.
